

SOUTHEAST AQUATIC RESOURCES PARTNERSHIP

# SARP

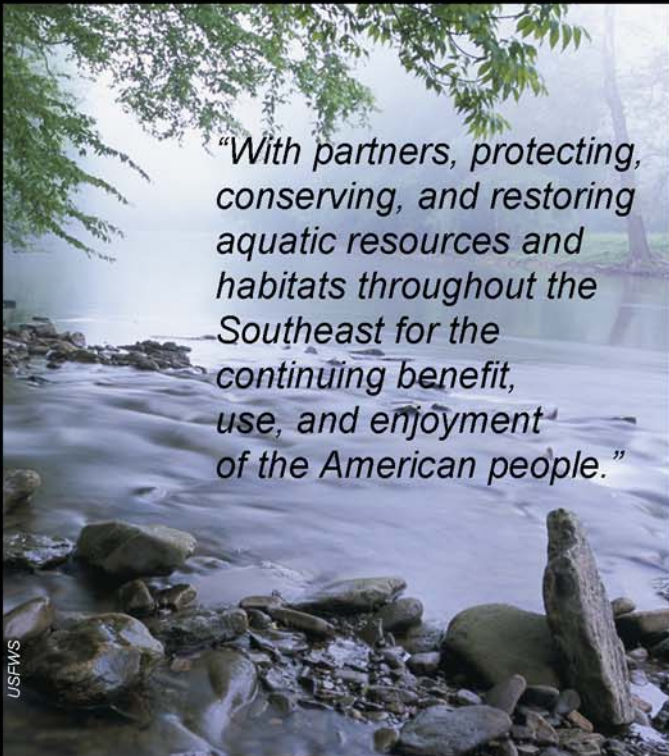

## The Partnership with a Plan...

***In the nation*** to implement the goals of the National Fish Habitat Action Plan on some of the nation's most ecologically and economically significant watersheds.

***In the region*** to conduct science-based watershed and habitat assessments that help collectively identify regional conservation priorities.

***In communities*** to facilitate locally-driven conservation projects, promoting citizen action and providing opportunities for individuals to make a difference.

*“With partners, protecting, conserving, and restoring aquatic resources and habitats throughout the Southeast for the continuing benefit, use, and enjoyment of the American people.”*

# SARP makes it happen!

Augmenting gravel bar spawning habitat for threatened fish species in Georgia

Restoring tidal marsh devastated by hurricanes in Mississippi

Restoring stream banks and critical mussel habitat in Kentucky

Enhancing sport fish habitat in large southern rivers and reservoirs

Restoring vital oyster reefs in Florida and Texas

Controlling aquatic invasive species across the Southeast

SARP delivers  
the National Fish  
Habitat Action Plan
